WHAT IS CLAIMED IS:

1 1 A Land again bladder dor 2000 0000000	CINCY
1 1. A box-assembly device, compr	isine.
1 1. 11 box abborner, active, corrept	

- a first locking part having two faces forming a first opening configured to 2
- receive an edge of a panel at a corner of a box to be constructed; and 3
- a second locking part that is integrated with an end of the first locking part 4
- into a single body, where the second locking part has two faces forming a second 5 opening configured to receive an edge of another panel at the corner of the box,
- wherein the first and second openings are oriented in the same direction. 7
- The box-assembly device according to claim 1, wherein the first and second 1 2.
- locking parts are integrated with each other at substantially a right angle into the 2
- 3 single body.

6

- The box-assembly device according to claim 1, wherein the first and second 3. 1
- locking parts are integrated with each other at substantially an obtuse angle into the 2
- single body. 3
- The box-assembly device according to claim 1 or 3, wherein each of the first 1 4.
- and second locking parts are provided with a plurality of compression ridges on inner 2
- surfaces thereof so as to increase a locking force thereof on the panels. 3
- The box-assembly device according to claim 4, wherein a locking hole is 5. 1
- formed on an outer surface of at least one of the two faces of the first and second 2
- 3 locking parts.
- The box-assembly device according to claim 4, wherein a locking projection is 6. 1

6

- formed on an outer surface of at least one of the two faces of the first and second 2
- 3 locking parts.

- The box-assembly device according to claim 4, wherein a locking hole is
- 2 formed on an outer surface of one of the two faces of the first and second locking
- 3 parts, while a complementary locking projection is formed on an outer surface of the
- 4 two faces of a remaining locking part.
- 5 8. A box-assembly, comprising:
- a first locking part having two substantially parallel first locking part faces configured for receiving a panel therebetween;
- a second locking part having another two substantially parallel faces configured for receiving another panel therebetween;
- a locking hole formed in an outer one of said first locking part faces; and
- a locking projection formed on an outer one of said second locking part faces,
- wherein said locking projection and said locking hole have complementary
- 13 dimensions.
- 14 9. The box-assembly according to claim 8, wherein inner sides of said first and
- second locking part faces have a plurality of compression ridges to help secure said
- panels to said first and second locking parts.
- 17 10. The box-assembly according to claim 8, wherein an angle formed between
- said first locking part and said second locking part is an obtuse angle.
